

Financial Loan Report – Executive Summary

In order to monitor and assess our bank's lending activities and performance, we will deliver a comprehensive Bank Loan Report. The report provides insights into key loan metrics and their changes over time to enable data-driven decisions, track portfolio health, and identify trends that inform lending strategy.

Dashboard 1: KPI Summary – What we'll track

Total Loan Applications

Count of applications in period, with Month-to-Date (MTD) and Month-over-Month (MoM) change tracking.

Total Funded Amount

Sum of funds disbursed as loans, with MTD and MoM comparisons.

Total Amount Received

All payments received from borrowers; tracked as cumulative, MTD, and MoM change.

Average Interest Rate

Portfolio average interest (all loans), MTD average, and MoM variation for pricing insight.

Average Debt-to-Income (DTI)

Average borrower DTI across loans, with MTD and MoM monitoring to assess credit risk.

Good Loans – Definition & KPIs

Good Loans include loans with status 'Fully Paid' and 'Current.' We will report: Good Loan Application Percentage, Good Loan Applications (count), Good Loan Funded Amount (principal disbursed), and Good Loan Total Received Amount (payments collected).

- ❏ These KPIs help quantify portfolio strength and repayment performance.

Bad Loans – Definition & KPIs

Bad Loans are defined as loans with status 'Charged Off.' We will report: Bad Loan Application Percentage, Bad Loan Applications (count), Bad Loan Funded Amount (principal disbursed), and Bad Loan Total Received Amount (collections to date).

- ❑ Tracking charged-off metrics isolates credit loss and recovery performance.

Loan Status Grid View — Single source of truth

Create a grid view by Loan Status to display: Total Loan Applications, Total Funded Amount, Total Amount Received, MTD Funded Amount, MTD Amount Received, Average Interest Rate, and Average DTI. This grid enables quick filters and comparisons across statuses for operational monitoring.

Purpose

Enable analysts to compare status-level metrics side-by-side for decisions and remediation.

Use

Operational review, ALM discussions, collections prioritization, and strategy adjustments.

Dashboard 2: Overview — Charting the story

We will visualize loan metrics using multiple chart types to reveal trends and distribution: monthly trends (line), regional analysis (filled map), loan term distribution (donut), employee-length and loan-purpose breakdowns (bar charts), and home-ownership impact (tree map).

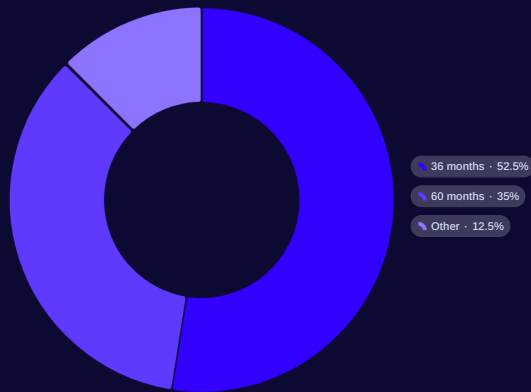

Each chart will display three core metrics where applicable: Total Loan Applications, Total Funded Amount, and Total Amount Received.

Monthly Trends by Issue Date – Line Chart

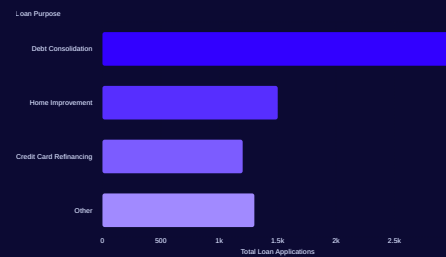

This line chart shows seasonality and long-term trends for applications, funded amounts, and receipts by issue month—enabling trend analysis and MoM change detection.

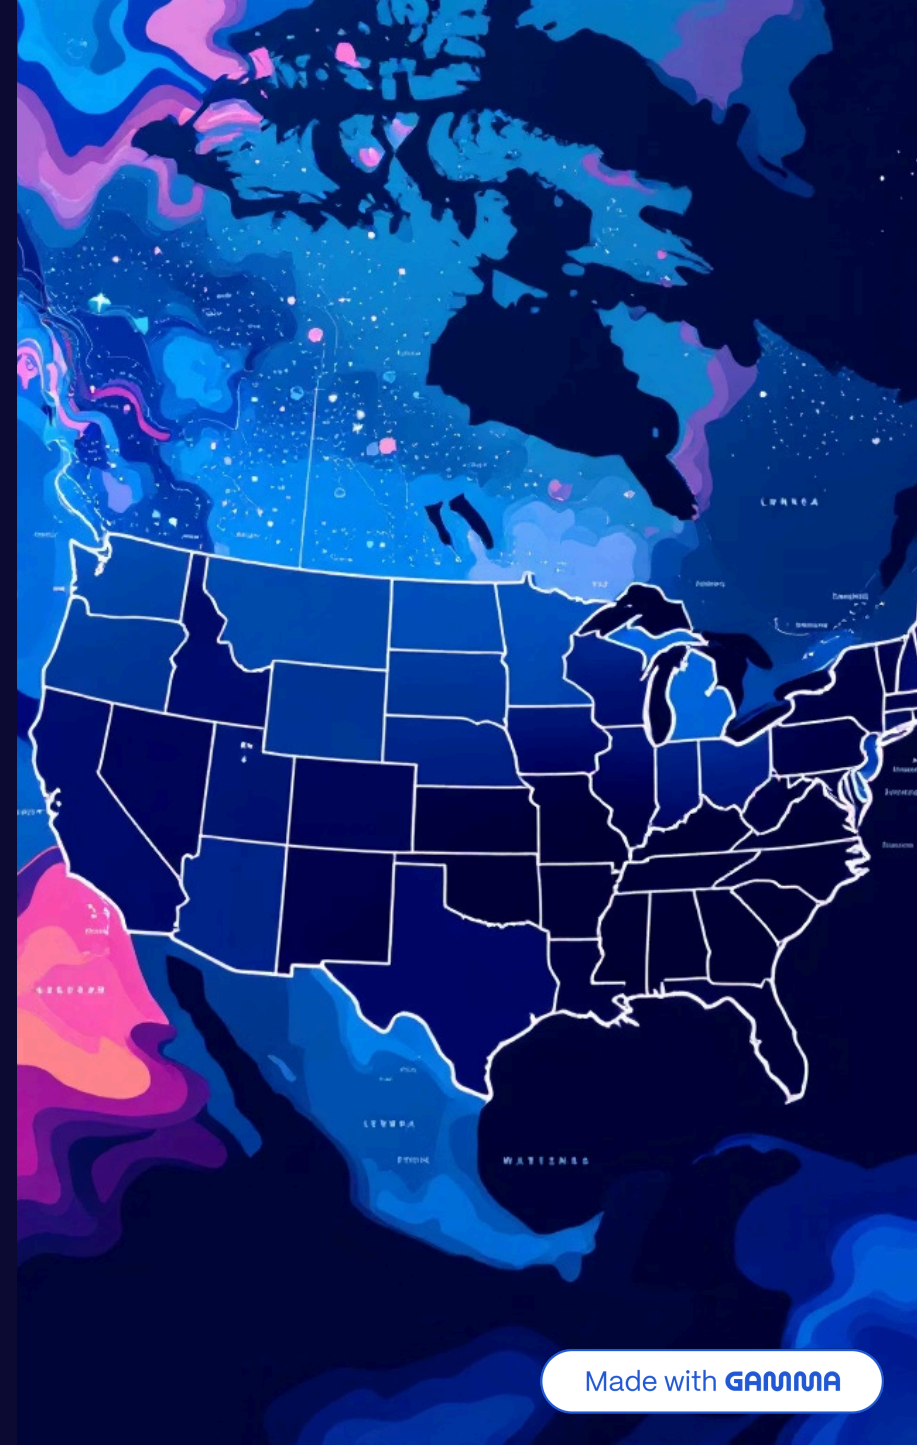

Regional & Term Distribution – Map, Donut, and Purpose Bars

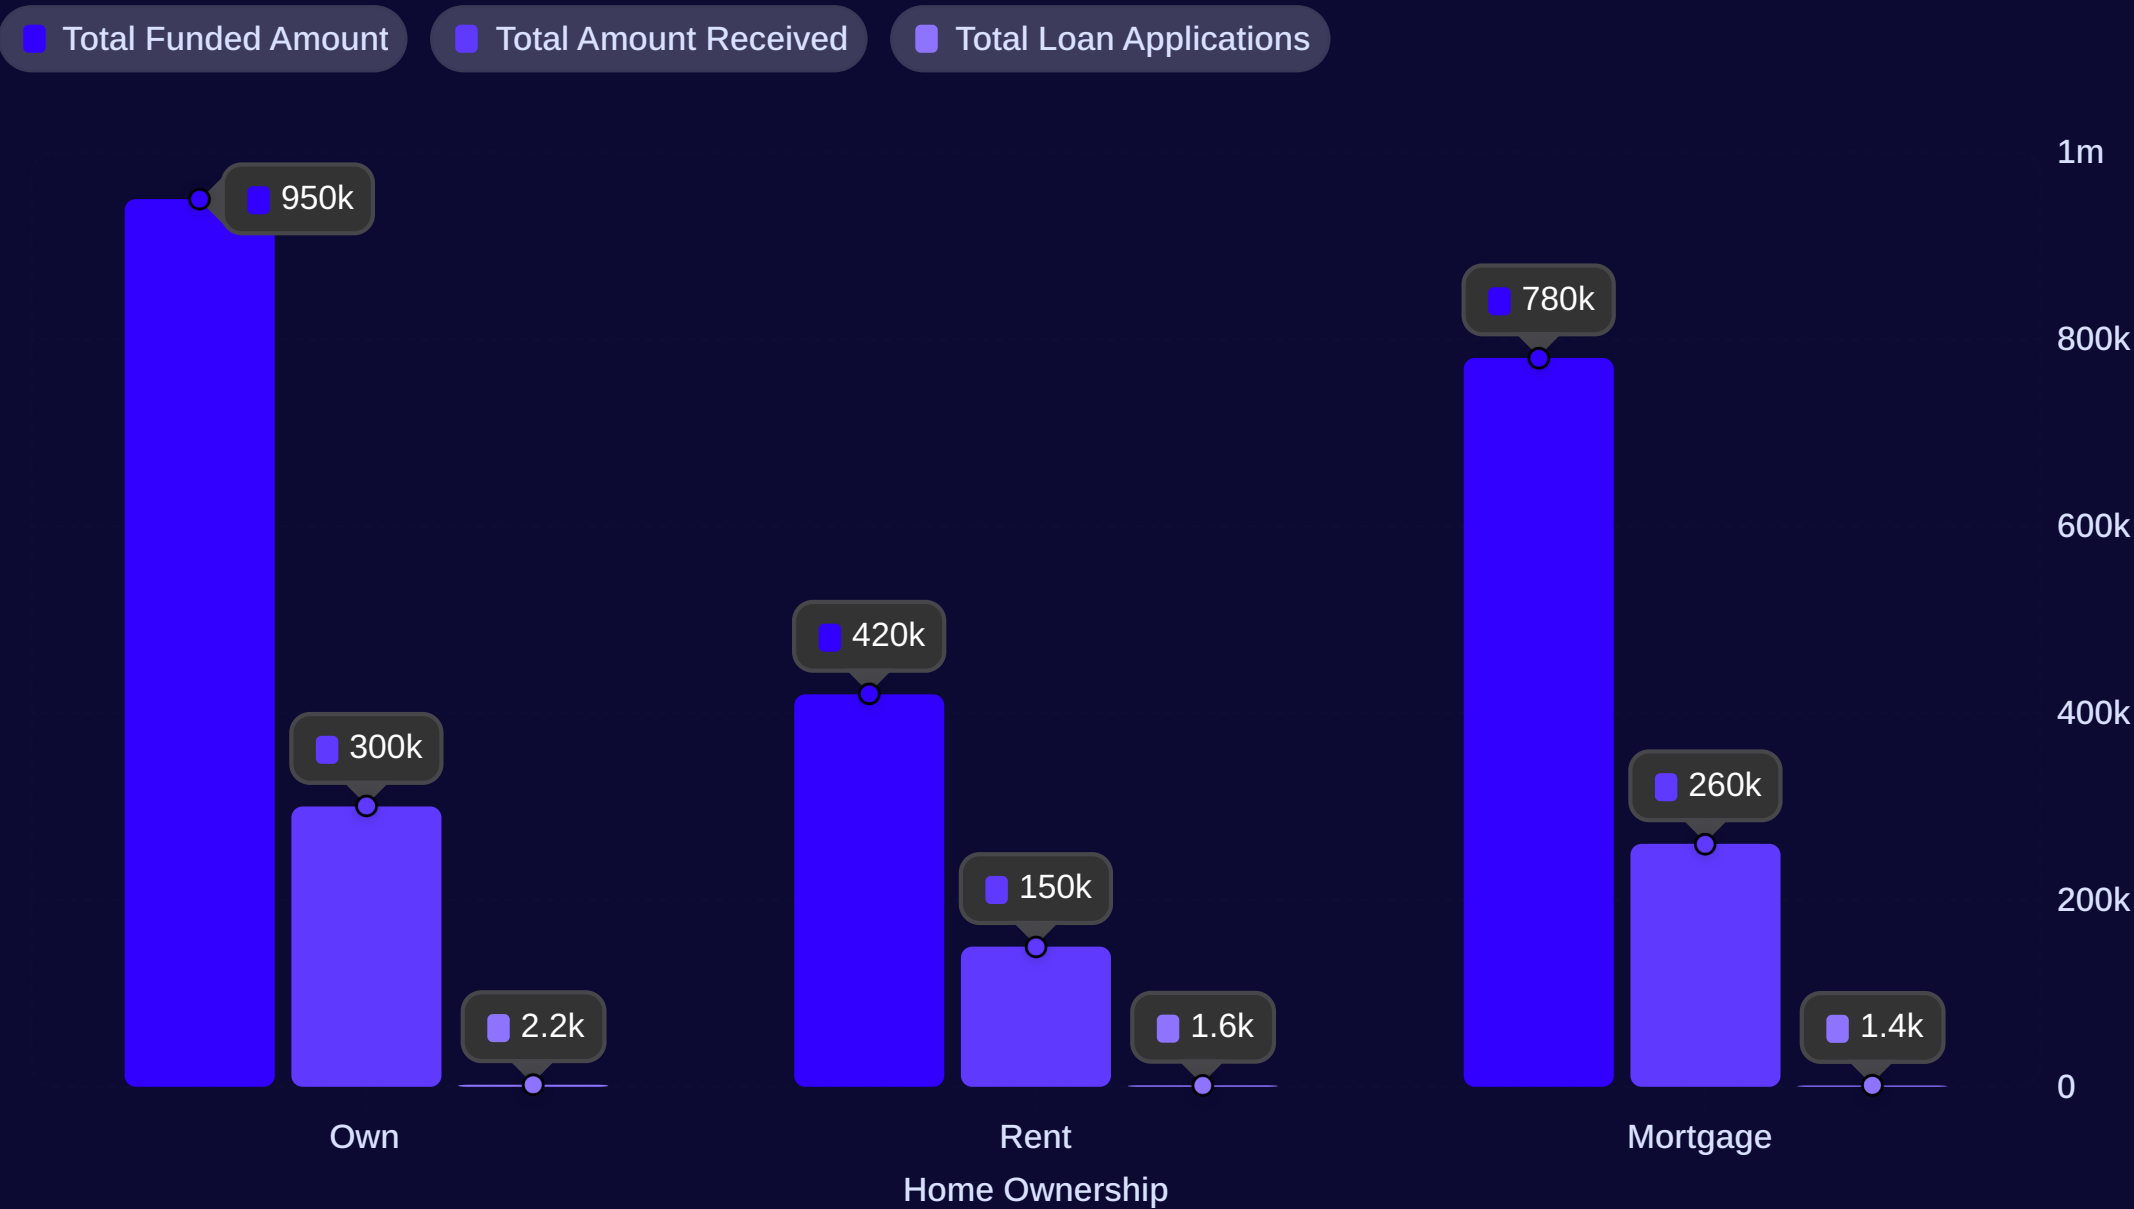

Donut chart displays distribution of loan terms (e.g., 36 vs 60 months) for applications, funded sums, and receipts.

Bar chart breaks down lending by stated loan purpose, highlighting demand drivers and opportunities for targeted products.

Home Ownership & Employee Length Insights

Tree map or heatmap view will present home ownership categories and employee length bands (1 yr, 5 yrs, 10+ yrs) to reveal how borrower profile correlates with applications, funded amounts, and receipts.

Employee Length

Segment lending by borrower employment tenure to assess default risk and product tailoring.

Home Ownership

Visualize ownership hierarchy (own, rent, mortgage) to prioritize outreach and underwriting rules.

Dashboard 3: Details

Dashboard & Next Steps

The Details Dashboard consolidates all essential loan data and borrower profiles into a single interface: portfolio KPIs, loan-level rows, status filters, trend charts, regional maps, and exportable views. Objective: provide a one-stop solution for analysts to access critical loan information efficiently for reporting, risk review, collections prioritization, and strategic planning.

Implement

Build grids, charts, and diagrams with MTD and MoM computations and theme color #8061FF for emphasis.

Validate

Confirm KPI definitions (Good vs. Bad loans), data sources, and calculation logic with stakeholders.

Operationalize

Deploy dashboards to users, schedule refresh cadence, and train teams on interpretation and actions.
